

Eigen::internal::traits< Derived >

Eigen::internal::traits< Derived >

Eigen::internal::traits< RefBase< Derived > >

```
graph BT; A[Eigen::internal::traits< RefBase< Derived > >] --> B[Eigen::internal::traits< Derived >]; A --> C[Eigen::internal::traits< Derived >];
```

The diagram illustrates the inheritance of traits in Eigen. A base class, `Eigen::internal::traits< RefBase< Derived > >`, is shown at the bottom. Two derived classes, `Eigen::internal::traits< Derived >`, are shown above it. Arrows point from the base class to both derived classes, indicating that the base class's traits are inherited by both derived classes.
