

`Eigen::Stride< Value, 0 >`

`Eigen::Stride< Value, 0 >`

`Eigen::OuterStride< Value >`

```
graph BT; A[Eigen::OuterStride< Value >] --> B[Eigen::Stride< Value, 0 >]; A --> C[Eigen::Stride< Value, 0 >];
```

The diagram illustrates the inheritance of the `Eigen::Stride` template. A central box at the bottom, `Eigen::OuterStride< Value >`, has two arrows pointing upwards to two boxes at the top, both labeled `Eigen::Stride< Value, 0 >`. This indicates that `Eigen::OuterStride` inherits from `Eigen::Stride` in two different contexts or overloads.
