

Eigen::internal::functor_traits< BinaryOp >

Eigen::internal::functor_traits< BinaryOp >

Eigen::internal::functor_traits< bind2nd_op< BinaryOp > >

```
graph BT; A[Eigen::internal::functor_traits< bind2nd_op< BinaryOp > >] --> B[Eigen::internal::functor_traits< BinaryOp >];
```

The diagram illustrates the inheritance of the `functor_traits` specialization. A box at the bottom, representing `bind2nd_op`, has an arrow pointing upwards to a box representing `BinaryOp`. This indicates that `BinaryOp` inherits the `functor_traits` specialization defined for `bind2nd_op`.
