

Eigen::internal::traits< ArgType >

Eigen::internal::traits< ArgType >

Eigen::internal::traits< EvalToTemp< ArgType > >

```
graph BT; A[Eigen::internal::traits< EvalToTemp< ArgType > >] --> B[Eigen::internal::traits< ArgType >]; A --> C[Eigen::internal::traits< ArgType >];
```

The diagram illustrates the inheritance of the `Eigen::internal::traits` template. A central box at the bottom, `Eigen::internal::traits< EvalToTemp< ArgType > >`, has two arrows pointing upwards to two identical boxes at the top, both labeled `Eigen::internal::traits< ArgType >`. This indicates that the traits for `EvalToTemp< ArgType >` are derived from the traits of `ArgType`.
