

Eigen::internal::blas\_traits< T >

Eigen::internal::blas\_traits< T >

Eigen::internal::blas\_traits< const T >

```
graph BT; A[Eigen::internal::blas_traits< const T >] --> B[Eigen::internal::blas_traits< T >]; A --> C[Eigen::internal::blas_traits< T >];
```

The diagram illustrates the inheritance of the `Eigen::internal::blas_traits` trait. A box at the bottom, labeled `Eigen::internal::blas_traits< const T >`, has two arrows pointing upwards to two boxes above it, both labeled `Eigen::internal::blas_traits< T >`. This indicates that the trait for a constant type inherits from the trait for the non-constant type.
