

Eigen::internal::traits< XprType >

Eigen::internal::traits< XprType >

Eigen::internal::traits< TensorScanOp< Op, XprType > >

```
graph BT; A[Eigen::internal::traits< TensorScanOp< Op, XprType > >] --> B[Eigen::internal::traits< XprType >]; A --> C[Eigen::internal::traits< XprType >];
```

The diagram illustrates the inheritance of the `Eigen::internal::traits` template. A central box at the bottom, `Eigen::internal::traits< TensorScanOp< Op, XprType > >`, has two arrows pointing upwards to two identical boxes at the top, both labeled `Eigen::internal::traits< XprType >`. This indicates that the traits for `TensorScanOp` inherit from the traits of `XprType`.
