

Eigen::internal::traits< Derived >

Eigen::internal::traits< Derived >

Eigen::internal::traits< SparseRefBase< Derived > >

```
graph BT; A[Eigen::internal::traits< SparseRefBase< Derived > >] --> B[Eigen::internal::traits< Derived >];
```

The diagram illustrates the inheritance of traits in Eigen. A box at the bottom, labeled 'Eigen::internal::traits< SparseRefBase< Derived > >', has a horizontal line extending from its center. From the left end of this line, a vertical arrow points up to the bottom of a box labeled 'Eigen::internal::traits< Derived >'. From the right end of the horizontal line, another vertical arrow points up to the bottom of a second box, also labeled 'Eigen::internal::traits< Derived >'.
