

Eigen::internal::traits< Derived >

Eigen::internal::traits< Derived >

Eigen::internal::traits< SparseCompressedBase< Derived > >

```
graph BT; A[Eigen::internal::traits< SparseCompressedBase< Derived > >] --> B[Eigen::internal::traits< Derived >]; A --> C[Eigen::internal::traits< Derived >];
```

The diagram illustrates the inheritance of the `Eigen::internal::traits` template. A box at the bottom, `Eigen::internal::traits< SparseCompressedBase< Derived > >`, has two arrows pointing upwards to two boxes at the top, both labeled `Eigen::internal::traits< Derived >`. This indicates that the traits of `SparseCompressedBase< Derived >` are derived from the traits of `Derived`.
